

## Synthetic Diamond Powders

D-Tec also deals in various types of synthetic diamond powders of Diamond Innovations (formerly GE Superabrasives USA). Synthetic diamond powders are used for various industrial applications (lapping, polishing, grinding, sawing) and also for polishing of precious (diamonds) and semi precious (ruby, emerald, cubic zirconia, etc.) stones. They are available in different particle shapes, grades and coatings.

### Diamond Powders for Polishing Diamonds

Synthetic diamond powders of General Electric Co, USA are being sold by D-Tec India since the 1983. The grade/size of diamond powder for polishing diamonds has been developed by GE Superabrasives specially for this industry in India. For best results in cutting and polishing of your diamonds insist only on D-Tec synthetic diamond powders.
